How does it work?

By phone -

1. Send a text to the CareWhere device.
2. The answer contains an internet link; open this to get the location.
3. Your phone opens the mapping and shows you where the device is.

On your computer -

1. Login to your CareWhere Solutions page.
2. Send a location request.
3. View the location and monitor the device live if necessary.

Our web based location panel -

You control what a call centre would. As part of our location package you get access to the device management and mapping panel.

Example showing mini digger operating within defined perimeter on construction site – alerts sent if it breaches perimeter

Security - protection of your vehicle, trailer or other asset -

- Whilst in use on the roads, sites or operating on hire
- In storage or transportation
- Be alerted if your vehicle is operating outside of hire / loan agreement.

Safety –

- Can be located in the event of breakdown or accident. Even if the vehicle batteries have failed, the location device will still do its job.
- Bodyworn safety belt / handheld personal location device using the same technology also available for drivers / operators
